

sharedPreferences

实验一：利用sharedpreferences实现登录页面

界面

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    tools:context=".MainActivity">

    <TextView
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:background="#AA0000FF"
        android:textSize="45sp"
        android:textColor="#FFFFFF"
        android:text="用户登陆" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_marginTop="10dp"
        android:textSize="25sp"
        android:textColor="#000000"
        android:text="请输入用户名:" />

    <EditText
        android:id="@+id/et_name"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:textSize="25sp"
        android:hint="用户名" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:textSize="25sp"
        android:textColor="#000000"
        android:text="请输入密码:" />

    <EditText
        android:id="@+id/et_passwd"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:hint="密码"
        android:textSize="25sp"
```

```

        android:inputType="textPassword" />
<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal">
    <CheckBox
        android:id="@+id/cb_save"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_marginTop="5dp"
        android:layout_weight="1"
        android:text="保存密码" />
    <CheckBox
        android:id="@+id/cb_login"

```

```

<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android">

    <uses-permission android:name="android.permission.READ_EXTERNAL_STORAGE" />
    <uses-permission android:name="android.permission.WRITE_EXTERNAL_STORAGE" />

    <application
        android:requestLegacyExternalStorage="true"
    </manifest>

```

SQLite

电脑cmd下

可以配置好环境变量：

sqlite3 class.db

表格创建：

```
create table student(sno integer primary key autoincrement, sname text not null,
sscore float);
```

查看表：

```
.tables
```

新增数据

```
insert into student(sname, sscore) values ("jia", 88);
```

删

```
delete from student where sno=1;
```

改

```
update student set sscore=90 where sno=1;
```

查

```
select * from student;
```

退出：.exit

进入虚拟机的虚拟环境

adb devices: 查询设备

adb shell / adb -s xxx shell

退出：exit

进入sdcard，创建文件夹，再sqlite3 xx.db

```
Cursor c = db.rawQuery("select * from student where sname=?",new String[]
{"finch"});

if(cursor.moveToFirst()) {
    String name = c.getString(c.getColumnIndex("sname"));
}
```

布局：

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"

        db.execSQL(createTableStu);
    }

    @Override
    public void onUpgrade(SQLiteDatabase db, int oldVersion, int newVersion) {
        String alterSQL = "ALTER TABLE student add phone varchar(12)";
        db.execSQL(alterSQL);
    }
}

```

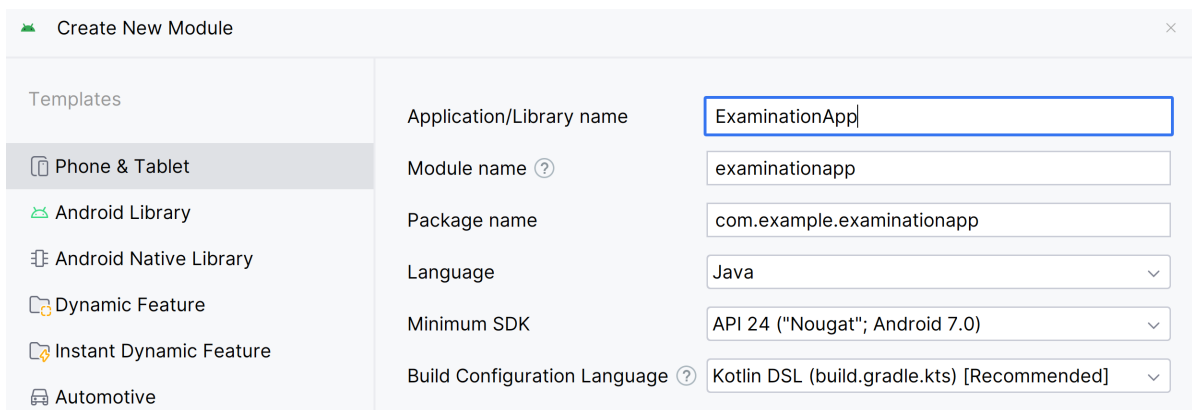

综合练习

步骤1：创建模块

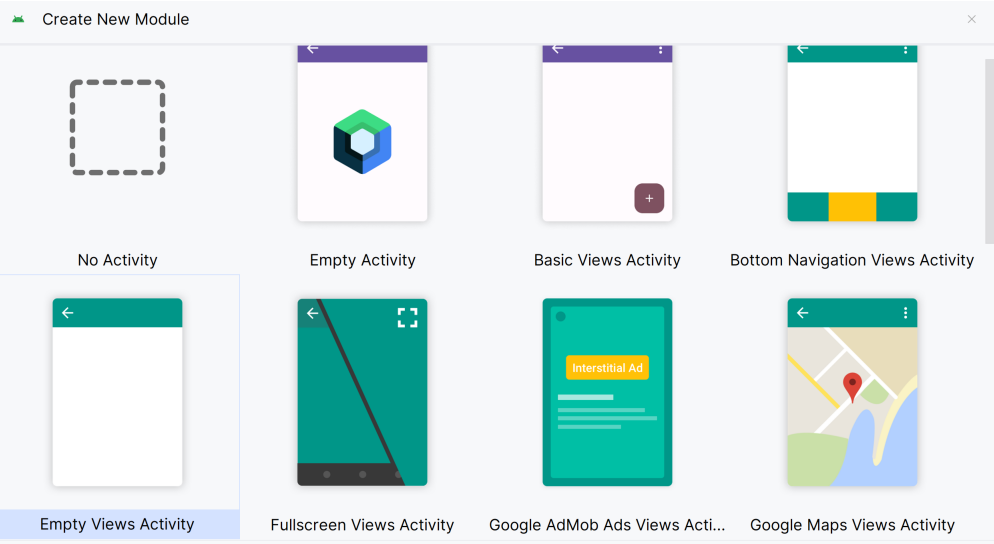

1. 打开Android Studio，在项目名称处右键，创建一个新的module。

2. 设置名称

3. 选择Empty Views Activity, Next -> Finish.

步骤2：创建相关页面文件 & 导入资源文件

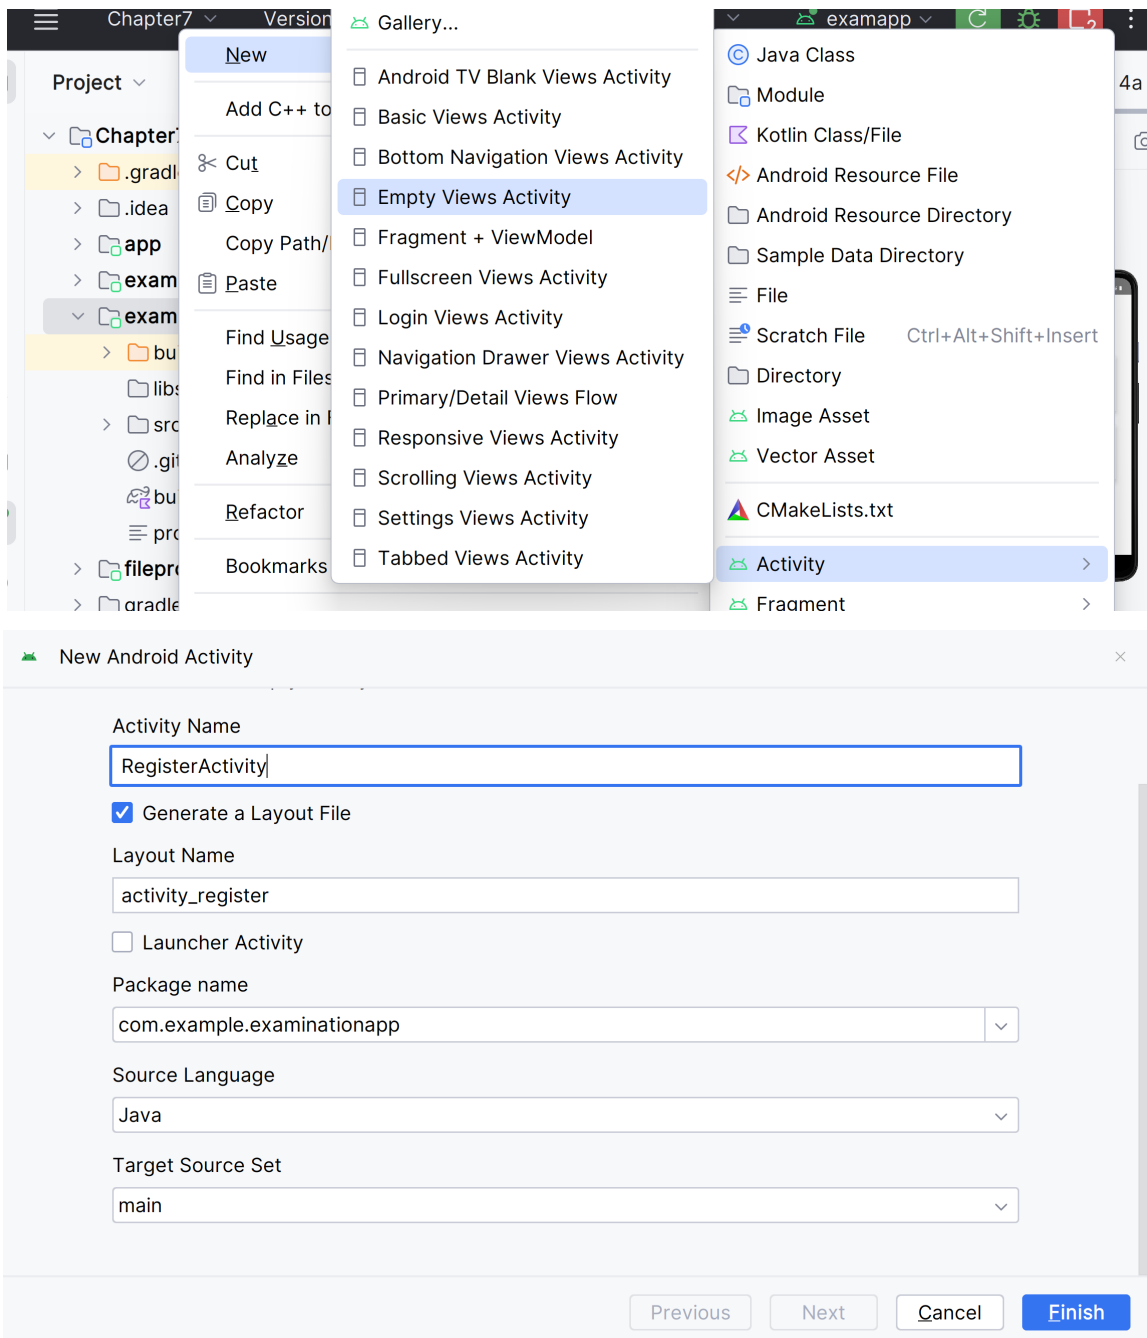

本应该包含的页面共有：

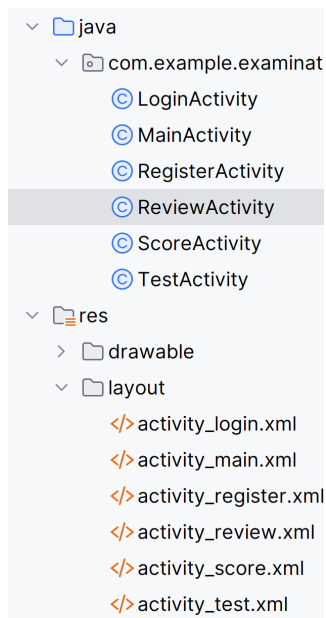

界面	对应的java与布局文件	功能 & 涉及操作
	登录界面: LoginActivity.java \n activity_login.xml	1. 注册：跳转到注册页面； 2. 登录：跳转到应用主页； 3. 用户密码校验

界面	对应的java与布局文件	功能 & 涉及操作
	注册界面: RegisterActivity.java \ activity_register.xml	<ol style="list-style-type: none"> 1. 用户输入信息并保存到数据库; 2. 校验用户是否已经注册; 3. 返回登录页面
	应用主页: MainActivity.java \ activity_main.xml	<ol style="list-style-type: none"> 1. 显示用户名; 2. 跳转到其他页面
	考试页面: TestActivity.java \ activity_test.xml	<ol style="list-style-type: none"> 1. 作答 2. 打分并保存成绩与作答结果
	查看考试结果: ReviewActivity.java \ activity_review.xml	<ol style="list-style-type: none"> 1. 查看作答结果

界面	对应的java与布局文件	功能 & 涉及操作
	查看成绩统计: ScoreActivity.java \ activity_score.xml	1. 查看成绩

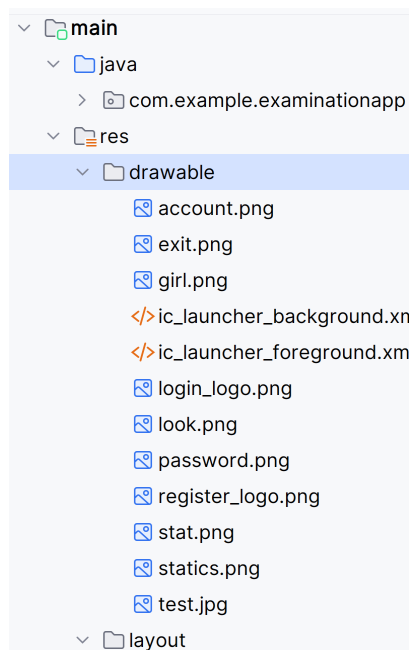

1. 创建以上页面的布局文件与java文件：在module名称右键 - new - activity：

2. 导入各种图标图片:

解压drawable.zip, 并将里面所有图片拉入examinationapp\src\main\res\drawable文件夹中:

3. 设置AndroidManifest.xml:

取消MainActivity为主页面, 设置LoginActivity为主页面。

```
<activity
    android:name=".TestActivity"
    android:exported="false" />
<activity
    android:name=".RegisterActivity"
    android:exported="false" />
<activity
    android:name=".MainActivity"
    android:exported="false" />
<activity
    android:name=".LoginActivity"
    android:exported="true">
    <intent-filter>
        <action android:name="android.intent.action.MAIN" />

        <category android:name="android.intent.category.LAUNCHER" />
    </intent-filter>
</activity>
```

步骤3：登录界面

1.布局： activity_login.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    tools:context=".LoginActivity">
    <!-- 第一张图片设置-->
    <TextView
        android:layout_width="400dp"
        android:layout_height="400dp"
        android:background="@drawable/login_logo"/>
    <!-- 用户登录-->
    <TextView
        android:id="@+id/textview"
        android:layout_width="match_parent"
        android:layout_height="60dp"
        android:gravity="center"
        android:text="用户登录"
        android:textColor="#5768C5"
        android:textSize="25dp"
        android:background="#225768C5"
        android:layout_marginTop="-60dp" />

    <!--输入用户名 & 密码-->
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:orientation="horizontal"
```

```

        android:padding="10dp">

        <ImageView
            android:layout_width="50dp"
            android:layout_height="50dp"
            android:layout_weight="0"
            app:srcCompat="@drawable/account" />

        <EditText
            android:id="@+id/et_uid"
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_weight="2"
            android:ems="10"
            android:hint="请输入您的学号"
            android:textSize="20sp" />

    </LinearLayout>

    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_weight="0"
        android:orientation="horizontal"
        android:padding="10dp">

        <ImageView
            android:layout_width="50dp"
            android:layout_height="50dp"
            android:layout_weight="0"
            app:srcCompat="@drawable/password" />

        <EditText
            android:id="@+id/et_upwd"
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_weight="1"
            android:ems="10"
            android:hint="请输入您的密码"
            android:textSize="20sp"
            android:inputType="textPassword" />

    </LinearLayout>
    <!-- 保存密码复选框-->
    <CheckBox
        android:id="@+id/cb_save"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="保存密码"
        android:layout_gravity="right"
        android:layout_marginRight="15dp"/>
    <!-- 登录按钮：跳转到应用主页-->
    <Button
        android:id="@+id/btn_login"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"

```

```

        android:text="登录"
        android:textSize="20sp"
        android:background="#4757AE"
        android:textColor="#FFFFFF"
        android:layout_gravity="center"/>
<!--跳转到注册按钮-->
<Button
    android:id="@+id/btn_register"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_gravity="center"
    android:text="还没有账号? 现在注册"
    android:textColor="#888282"
    android:background="#00FFFFFF" />
</LinearLayout>

```

2.页面初始化: LoginActivity.java

step 1-5

```

package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.view.View;
import android.widget.CheckBox;
import android.widget.EditText;
//4-让当前activity实现OnClickListener接口，并实现onClick方法
public class LoginActivity extends AppCompatActivity implements
View.OnClickListener {
    //    3-设置变量为全局变量
    private EditText et_uid;
    private EditText et_upwd;
    private CheckBox cb_save;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_login);
        //    2-调用初始化方法
        initView();
    }

    //    1-页面控件初始化
    void initView() {
        // 学号输入框
        et_uid = findViewById(R.id.et_uid);
        // 密码输入框
        et_upwd = findViewById(R.id.et_upwd);
        // 是否保存密码复选框
        cb_save = findViewById(R.id.cb_save);
        findViewById(R.id.btn_login).setOnClickListener(this); // 设置监听：登录按钮
        findViewById(R.id.btn_register).setOnClickListener(this); //设置监听：跳转
        注册
    }
}

```

```

    }

    //    5-在onClick中写入按钮监听的事件
    @Override
    public void onClick(View v) {

    }
}

```

3. 页面跳转: LoginActivity.java

在onClick设置页面跳转:

```

//    5-在onClick中写入按钮监听的事件
@Override
public void onClick(View v) {
//    登录按钮跳转到主页
    if (v.getId() == R.id.btn_login) {
        Intent i = new Intent(this, MainActivity.class);
        startActivity(i);
    } else { // 注册按钮跳转到注册页面
        Intent i = new Intent(this, RegisterActivity.class);
        startActivity(i);
    }
}
}

```

步骤4: 注册页面

1. 布局文件: activity_register.xml

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    tools:context=".RegisterActivity">
    <!--注册图标-->
    <TextView
        android:layout_width="220dp"
        android:layout_height="220dp"
        android:background="@drawable/register_logo"
        android:layout_gravity="center"
        android:layout_margin="20dp"/>
    <!--用户注册-->
    <TextView
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="用户注册"
        android:textColor="#0C6BC2"

```

```

        android:textSize="25sp"
        android:background="#220C6BC2"
        android:layout_margin="10dp"/>
<!--用户信息输入框-->
<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="0"
        android:text="学号:  "
        android:textColor="#0C6BC2"
        android:textSize="25sp" />

    <EditText
        android:id="@+id/et_rsid"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:ems="10"
        android:hint="请输入需要注册的学号"
        android:textSize="20sp" />
</LinearLayout>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="0"
        android:text="密码:  "
        android:textColor="#0C6BC2"
        android:textSize="25sp" />

    <EditText
        android:id="@+id/et_rpwd"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:ems="10"
        android:hint="请输入密码"
        android:textSize="20sp"
        android:inputType="textPassword" />
</LinearLayout>
<LinearLayout

```

```

        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:orientation="horizontal"
        android:layout_marginHorizontal="20dp"
        android:layout_marginVertical="5dp">

        <TextView
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_weight="0"
            android:text="姓名:  "
            android:textColor="#0C6BC2"
            android:textSize="25sp" />

        <EditText
            android:id="@+id/et_rname"
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_weight="1"
            android:ems="10"
            android:hint="请输入姓名"
            android:textSize="20sp"
            android:inputType="textPersonName" />
    </LinearLayout>
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:orientation="horizontal"
        android:layout_marginHorizontal="20dp"
        android:layout_marginVertical="5dp">

        <TextView
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_weight="0"
            android:text="学院:  "
            android:textColor="#0C6BC2"
            android:textSize="25sp" />

        <EditText
            android:id="@+id/et_rdep"
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_weight="1"
            android:ems="10"
            android:hint="请输入学院"
            android:textSize="20sp" />
    </LinearLayout>
    <!--注册按钮-->
    <Button
        android:id="@+id/btn_registeruser"
        android:layout_width="wrap_content"

        android:layout_gravity="center"
        android:layout_margin="20dp"

```

```
        android:text="注册"
        android:textSize="25sp"
        android:textColor="#FFFFFF"
        android:background="#1C8DE6" />
</LinearLayout>
```

2. 页面初始化: RegisterActivity.java

```
package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.view.View;
import android.widget.EditText;
//4-让当前activity实现OnClickListener接口，并实现onClick方法
public class RegisterActivity extends AppCompatActivity implements
    View.OnClickListener{
    //    3-设置变量为全局变量
    private EditText et_rid;
    private EditText et_rname;
    private EditText et_rpwd;
    private EditText et_rdep;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_register);
    //    2-调用初始化方法
        initView();
    }
    //    1-页面控件初始化
    void initView() {
        et_rid = findViewById(R.id.et_rsid); //学号输入框
        et_rname = findViewById(R.id.et_rname); //学生姓名输入框
        et_rpwd = findViewById(R.id.et_rpwd); //学生密码输入框
        et_rdep = findViewById(R.id.et_rdep); //学生学院输入框
        findViewById(R.id.btn_registeruser).setOnClickListener(this); // 注册按钮
        监听
    }
    //    5-在onClick中写入按钮监听的事件
    @Override
    public void onClick(View v) {

    }
}
```

3. 用户输入信息并保存到数据库

3-1 数据库表格设计：student

字段名	类型	含义
sid	text	学号，主键
sname	text	姓名
sdep	text	学院
sscore	integer	学生成绩
examcnt	integer	学生考试次数
examtime	text	学生考试时间
examans	text	学生考试答案

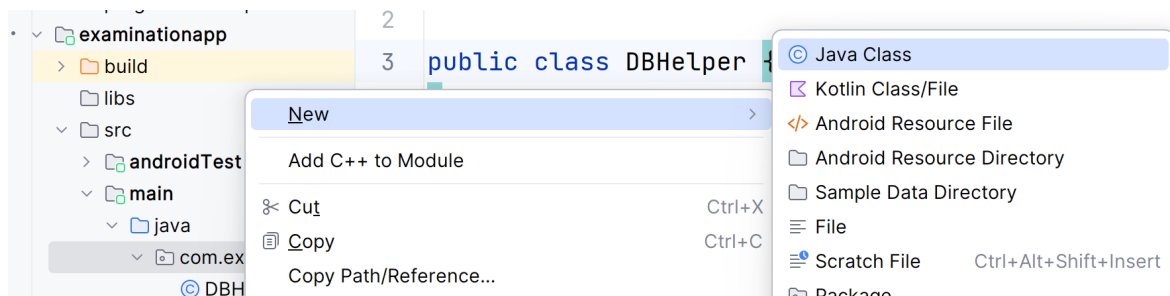

顺便创建后续要使用的examinfo表格：

examinfo

字段名	类型	含义
tno	integer	主键，自动生成
question	text	题目
opt1	text	选项1
opt2	text	选项2
opt3	text	选项3
opt4	text	选项4
rightans	text	正确答案

3-2 数据库相关文件创建

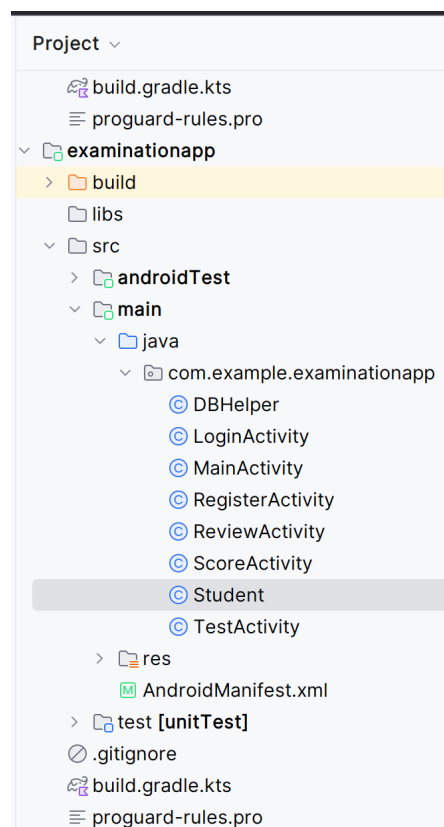

java下应用包名的文件夹右键new - Java Class：

创建java文件：DBHelper和Student：

目录结构为：

3-3 数据库创建与表格创建

1. 初始化：DBHelper.java

step1-3

```
package com.example.examinationapp;

import android.content.Context;
import android.database.sqlite.SQLiteDatabase;
import android.database.sqlite.SQLiteOpenHelper;

import androidx.annotation.Nullable;
```

```

//1-继承SQLiteOpenHelper抽象类
public class DBHelper extends SQLiteOpenHelper {
//    3-创建构造函数
    public DBHelper(@Nullable Context context, @Nullable String name, @Nullable
        SQLiteDatabase.CursorFactory factory, int version) {
        super(context, name, factory, version);
    }

//2-实现onCreate以及onUpgrade方法
    @Override
    public void onCreate(SQLiteDatabase db) {

    }

    @Override
    public void onUpgrade(SQLiteDatabase db, int oldVersion, int newVersion) {

    }
}

```

2. 创建数据库与student表格: DBHelper.java

step1-4

```

package com.example.examinationapp;

import android.content.Context;
import android.database.SQLException;
import android.database.sqlite.SQLiteDatabase;
import android.database.sqlite.SQLiteOpenHelper;

import androidx.annotation.Nullable;

public class DBHelper extends SQLiteOpenHelper {
    //    1-定义数据库名称,表格名称
    public static final String DB_NAME = "examination.db";
    public static final String TABLE_STU = "student";
    public static final String TABLE_EXAM = "examinfo";
    // 2-定义建表语句:创建student表格与examinfo表格
    private static final String CREATE_TABLE_STU = "create table if not exists "
+
        TABLE_STU + "(sid text primary key, " +
        "sname text not null, spwd text not null, " +
        "sdep text, sscore integer," +
        "examcnt integer, examtime text, examans text)";
    private static final String CREATE_TABLE_EXAM = "create table if not exists "
+
        TABLE_EXAM + "(tno integer primary key autoincrement, " +
        "question text not null, opt1 text not null," +
        "opt2 text not null, opt3 text not null," +
        "opt4 text not null, rightans text not null)";
    //    3-修改构造函数
    public DBHelper(@Nullable Context context) {
        super(context, DB_NAME, null, 1);
    }
}

```

```
// 4-创建表格
@Override
public void onCreate(SQLiteDatabase db) {
    try {
        db.execSQL(CREATE_TABLE_STU);
        db.execSQL(CREATE_TABLE_EXAM);
    } catch (SQLException e) {
        e.printStackTrace();
    }
}

@Override
public void onUpgrade(SQLiteDatabase db, int oldVersion, int newVersion) {

}

}
```

3-4 定义student对象：Student.java

定义student对象的属性以及其中的set与get属性的方法。

```
package com.example.examinationapp;

public class Student {
    public String sid;
    public String sname;
    public String spwd;
    public String sdep = "";
    public int sscore = 0;
    public int examcnt = 0;
    public String examans;
    public String examtime = "";

    public Student() {

    }

    public Student(String sid, String sname, String spwd, String sdep) {
        this.sid = sid;
        this.sname = sname;
        this.spwd = spwd;
        this.sdep = sdep;
    }

    public void setSid(String sid) {
        this.sid = sid;
    }

    public void setName(String sname) {
        this.sname = sname;
    }

    public void setSpwd(String spwd) {
        this.spwd = spwd;
    }

    public void setSdep(String sdep) {
        this.sdep = sdep;
    }
}
```

```

    public void setSscore(int sscore) {
        this.sscore = sscore;
    }
    public void setExamans(String examans) {
        this.examans = examans;
    }
    public void setExamcnt(int examcnt) {
        this.examcnt = examcnt;
    }
    public String getExamans() {
        return examans;
    }
    public int getSscore() {
        return sscore;
    }
    public int getExamcnt() {
        return examcnt;
    }
    public String getSname() {
        return sname;
    }
    public String getsid() {
        return sid;
    }
    public String getsdep() {
        return sdep;
    }
    public String getSpwd() {
        return spwd;
    }
}

```

3-5 定义student表格插入方法：DBHelper.java

在DBHelper类中加入registerStu方法：

```

public long registerStu(Student stu) {
    SQLiteDatabase db = getWritableDatabase();
    ContentValues vals = new ContentValues();
    vals.put("sid", stu.getSid());
    vals.put("sname", stu.getSname());
    vals.put("spwd", stu.getSpwd());
    vals.put("sdep", stu.getSdep());
    long res = db.insert(TABLE_STU, null, vals);
    return res;
}

```

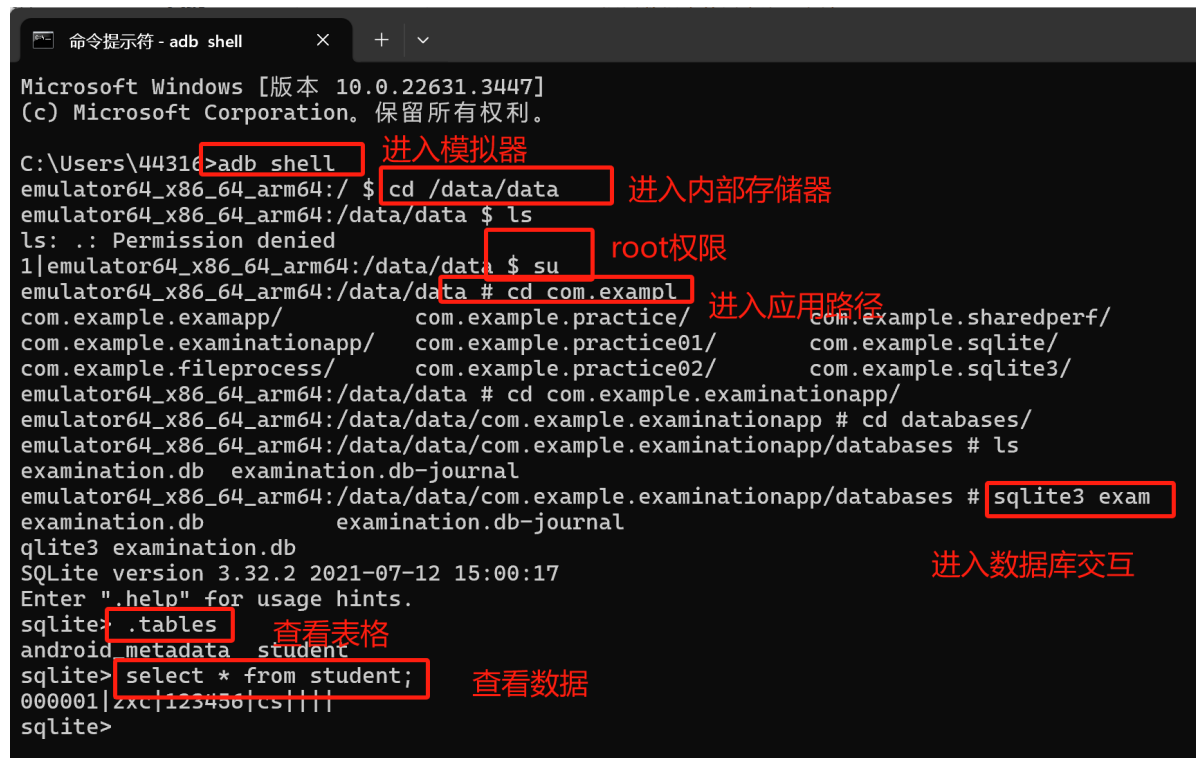

3-6在注册页面实现数据库相关操作: RegisterActivity.java

在注册按钮的监听中设置相关的动作。

- 数据库数据插入
- 根据是否成功插入数据判断该用户是否已经被注册
- 关闭当前activity

```
public void onClick(View v) {  
    // 1-获得页面用户输入值  
    String rid = et_rid.getText().toString();  
    String rname = et_rname.getText().toString();  
    String rpwd = et_rpwd.getText().toString();  
    String rdep = et_rdep.getText().toString();  
    Student stu = new Student(rid, rname, rpwd, rdep);  
    // 2-dbHelper初始化  
    DBHelper dbHelper = new DBHelper(this);  
    // 3-调用数据库的用户注册方法  
    if (dbHelper.registerStu(stu) > 0) { // 成功插入数据,返回登录页面  
        Toast.makeText(this, "注册成功", Toast.LENGTH_SHORT).show();  
        finish(); // 4-将当前的activity结束,则返回登录页面  
    } else { // 5-没有成功往数据库中插入数据,则表示改用户已经被注册  
        Toast.makeText(this, "注册失败: 该学号已经被注册",  
            Toast.LENGTH_LONG).show();  
    }  
}
```

3-7 验证数据库有没有成功创建以及用户注册数据是否成功插入表格。

```
Microsoft Windows [版本 10.0.22631.3447]  
(c) Microsoft Corporation. 保留所有权利。  
  
C:\Users\44316>adb shell 进入模拟器  
emulator64_x86_64_arm64:/ $ cd /data/data 进入内部存储器  
emulator64_x86_64_arm64:/data/data $ ls  
ls: .: Permission denied  
1|emulator64_x86_64_arm64:/data/data $ su root权限  
emulator64_x86_64_arm64:/data/data # cd com.example 进入应用路径  
com.example.examapp/ com.example.practice/ com.example.sharedperf/  
com.example.examinationapp/ com.example.practice01/ com.example.sqlite/  
com.example.fileprocess/ com.example.practice02/ com.example.sqlite3/  
emulator64_x86_64_arm64:/data/data # cd com.example.examinationapp/  
emulator64_x86_64_arm64:/data/data/com.example.examinationapp # cd databases/  
emulator64_x86_64_arm64:/data/data/com.example.examinationapp/databases # ls  
examination.db examination.db-journal  
emulator64_x86_64_arm64:/data/data/com.example.examinationapp/databases # sqlite3 exam 进入数据库交互  
qlite3 examination.db  
SQLite version 3.32.2 2021-07-12 15:00:17  
Enter ".help" for usage hints.  
sqlite> .tables 查看表格  
android metadata student  
sqlite> select * from student; 查看数据  
000001|zxc|123456|cs|||  
sqlite>
```

步骤5：完善登录界面功能

1. 用户名密码校验方法: DBHelper.java

在DBHelper类中新增学生校验的方法: verifyStu, 根据学号以及密码在student表格中进行查询, 查询到结果则证明学号密码正确, 返回学生姓名, 否则返回空字符串。step1-3.

```
public String verifyStu(String sid, String spwd) {
    SQLiteDatabase db = getReadableDatabase();
    String whereClause = "sid=? and spwd=?";
    // 1-根据学号以及密码进行查询
    Cursor cursor = db.query(TABLE_STU,
        null, whereClause,
        new String[] {sid, spwd}, null, null, null);
    // 2-查询到数据:返回学生名字
    if(cursor.getCount() > 0) {
        cursor.moveToNext();
        return cursor.getString(cursor.getColumnIndex("sname"));
    }
    // 3-否则,返回空字符串
    return "";
}
```

2. 在登录页面进行校验: LoginActivity.java

step1-5

```
public void onClick(View v) {

    if (v.getId() == R.id.btn_login) {
        // 1-获得页面用户输入
        String uid = et_uid.getText().toString();
        String upwd = et_upwd.getText().toString();
        boolean isSave = cb_save.isChecked();
        try {
            // 2-数据库初始化
            DBHelper dbHelper = new DBHelper(this);
            // 3-调用数据库的方法校验用户
            String sname = dbHelper.verifyStu(uid, upwd);
            // 4-判断返回的学生姓名是否为空
            if (!sname.equals("")) {
                // 5-登录按钮跳转到主页: 在intent中增加数据,实现带数据的跳转
                Intent i = new Intent(this, MainActivity.class);
                i.putExtra("sname", sname);
                i.putExtra("sid", uid);
                startActivity(i);
            } else {
                // 6-学生姓名为空,告诉用户登录失败
                Toast.makeText(this, "登录失败: 用户名或密码错误",
                    Toast.LENGTH_LONG).show();
            }
        } catch (SQLException e) {
            e.printStackTrace();
        }
    } else { // 注册按钮跳转到注册页面
        Intent i = new Intent(this, RegisterActivity.class);
    }
}
```

```
        startActivity(i);  
    }  
}
```

3. 保存密码: LoginActivity.java

参考sharedPreferences中的方法实现。

步骤6：主页面

1. 布局文件: activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>  
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"  
    xmlns:app="http://schemas.android.com/apk/res-auto"  
    xmlns:tools="http://schemas.android.com/tools"  
    android:layout_width="match_parent"  
    android:layout_height="match_parent"  
    android:orientation="vertical"  
    tools:context=".MainActivity">  
  
    <LinearLayout  
        android:layout_width="match_parent"  
        android:layout_height="wrap_content"  
        android:orientation="horizontal"  
        android:gravity="center"  
        android:layout_marginTop="20sp">  
  
        <!--用户头像-->  
        <ImageView  
            android:layout_width="60dp"  
            android:layout_height="60dp"  
            app:srcCompat="@drawable/girl"  
            android:layout_marginVertical="40dp"  
            android:layout_marginHorizontal="10dp"/>  
  
        <!--欢迎用户词-->  
        <TextView  
            android:id="@+id/tv_welcome"  
            android:layout_width="wrap_content"  
            android:layout_height="match_parent"  
            android:layout_weight="1"  
            android:layout_marginVertical="50dp"  
            android:layout_marginHorizontal="10dp"  
            android:textColor="#4F92CF"  
            android:textSize="25sp" />  
        </LinearLayout>  
  
        <LinearLayout  
            android:layout_width="match_parent"  
            android:layout_height="wrap_content"  
            android:orientation="horizontal"  
            android:gravity="center">
```

```

<LinearLayout
    android:id="@+id/layout_test"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="#FFFFFF"
    android:orientation="vertical"
    android:layout_margin="20dp"
    android:elevation="10dp"
    android:padding="20dp">

    <ImageView
        android:layout_width="90dp"
        android:layout_height="90dp"
        app:srcCompat="@drawable/test" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="考试"
        android:textColor="#252020"
        android:layout_gravity="center"
        android:textSize="20sp" />
</LinearLayout>
<!-- 查看考试 -->
<LinearLayout
    android:id="@+id/layout_review"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="#FFFFFF"
    android:orientation="vertical"
    android:layout_margin="20dp"
    android:elevation="10dp"
    android:padding="20dp">

    <ImageView
        android:layout_width="90dp"
        android:layout_height="90dp"
        app:srcCompat="@drawable/look" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="查看考试"
        android:textColor="#252020"
        android:layout_gravity="center"
        android:textSize="20sp" />
</LinearLayout>
</LinearLayout>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:gravity="center">
<!-- 成绩统计 -->

```

```
<LinearLayout
    android:id="@+id/layout_score"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="#FFFFFF"
    android:orientation="vertical"
    android:layout_margin="20dp"
    android:elevation="10dp"
    android:padding="20dp">

    <ImageView
        android:layout_width="90dp"
        android:layout_height="90dp"
        app:srcCompat="@drawable/statics" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="成绩统计"
        android:textColor="#252020"
        android:layout_gravity="center"
        android:textSize="20sp" />
</LinearLayout>
<!--退出登录-->
<LinearLayout
    android:id="@+id/layout_exit"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="#FFFFFF"
    android:orientation="vertical"
    android:layout_margin="20dp"
    android:elevation="10dp"
    android:padding="20dp">

    <ImageView
        android:layout_width="90dp"
        android:layout_height="90dp"
        app:srcCompat="@drawable/exit" />

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="退出登录"
        android:textColor="#252020"
        android:layout_gravity="center"
        android:textSize="20sp" />
</LinearLayout>
</LinearLayout>
</LinearLayout>
```

2. 页面初始化: MainActivity.java

step1-7

```
package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.TextView;

public class MainActivity extends AppCompatActivity implements
View.OnClickListener {
    //    7-设置全局变量
    private String sname;
    private String sid;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    //    6-调用initview
        initView();
    }
    //    1-页面控件初始化
    void initView() {
        TextView tv_welcome = findViewById(R.id.tv_welcome);
        //    2-获得从login页面传过来的intent
        if (getIntent() != null) {
            Intent i = getIntent();
            //    3-从中取出学生姓名,学号信息
            sname = i.getStringExtra("sname");
            sid = i.getStringExtra("sid");
            //    4-在页面显示用户名
            tv_welcome.setText("欢迎用户: " + sname);
        }
    //    5-对页面四个layout设置监听
        findViewById(R.id.layout_test).setOnClickListener(this);
        findViewById(R.id.layout_review).setOnClickListener(this);
        findViewById(R.id.layout_score).setOnClickListener(this);
        findViewById(R.id.layout_exit).setOnClickListener(this);
    }

    @Override
    public void onClick(View v) {

    }
}
```

3. 实现页面跳转功能：MainActivity.java

在监听里面设置页面跳转。

```
public void onClick(View v) {
    if (v.getId() == R.id.layout_test) {
//        跳转到考试页面
        Intent i = new Intent(this, TestActivity.class);
        i.putExtra("sname", sname);
        i.putExtra("sid", sid);
        startActivity(i);
    } else if (v.getId() == R.id.layout_review) {
//        跳转到查看考试页面
        Intent i = new Intent(this, ReviewActivity.class);
        i.putExtra("sid", sid);
        startActivity(i);
    } else if (v.getId() == R.id.layout_score) {
//        跳转到查看成绩页面
        Intent i = new Intent(this, ScoreActivity.class);
        i.putExtra("sid", sid);
        startActivity(i);
    } else {
//        返回登录页面
        Intent i = new Intent(this, LoginActivity.class);
        startActivity(i);
    }
}
```

步骤7：考试页面

1. 布局文件：activity_test.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="10dp"
    tools:context=".TestActivity">
    <LinearLayout
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:orientation="horizontal"
        android:layout_marginTop="15dp">
<!--显示学生姓名-->
        <TextView
            android:id="@+id/tv_sname"
            android:layout_width="0dp"
            android:layout_height="wrap_content"
            android:layout_weight="1"
            android:textSize="20sp"
            android:textColor="#88888888">
```

```

        android:layout_gravity="left"/>
<!-- 显示学生当前做题进度-->
<TextView
    android:id="@+id/tv_cnt"
    android:layout_width="0dp"
    android:layout_height="wrap_content"
    android:layout_weight="1"
    android:textSize="20sp"
    android:textColor="#88888888"
    android:layout_gravity="right"/>
</LinearLayout>
<!-- 题目-->
<TextView
    android:id="@+id/tv_question"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textSize="30sp"
    android:textColor="#555555"
    android:layout_marginVertical="10dp"/>
<!-- 四个选项-->
<TextView
    android:id="@+id/tv_option1"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#1157bbc5"/>

<TextView
    android:id="@+id/tv_option2"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#2257bbc5"/>
<TextView
    android:id="@+id/tv_option3"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#1157bbc5"/>
<TextView
    android:id="@+id/tv_option4"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#2257bbc5"/>
<!-- 显示学生选择的答案-->
<TextView

```

```
        android:id="@+id/tv_choose"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_marginVertical="10dp"
        android:textSize="25sp"/>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="20dp"
    android:orientation="horizontal">
    <!-- 上一题 -->
    <Button
        android:id="@+id/btn_pre"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="上一题"
        android:textColor="#FFFFFF"
        android:background="#4757AE"
        android:layout_margin="20dp"
        android:textSize="20sp"/>
    <!-- 下一题 -->
    <Button
        android:id="@+id/btn_next"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="下一题"
        android:textColor="#FFFFFF"
        android:background="#4757AE"
        android:layout_margin="20dp"
        android:textSize="20sp"/>
    <!-- 交卷 -->
    <Button
        android:id="@+id/btn_submit"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="交卷"
        android:textColor="#FFFFFF"
        android:background="#4757AE"
        android:layout_margin="20dp"
        android:textSize="20sp"/>
    </LinearLayout>
</LinearLayout>
```

2. 页面初始化: TestActivity.java

step1-7

```
package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.database.Cursor;
import android.os.Bundle;
import android.view.View;
import android.widget.TextView;
//7-当前activity实现OnClickListener接口
public class TestActivity extends AppCompatActivity implements
View.OnClickListener {
    //    6-设置全局变量
    private TextView tv_sname;
    private TextView tv_cnt;
    private TextView tv_question;
    private TextView tv_option1;
    private TextView tv_option2;
    private TextView tv_option3;
    private TextView tv_option4;
    private TextView tv_choose;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_test);
        //    4-调用initView
        initView();
        //    5-获得从Main页面传过来的intent
        if (getIntent() != null) {
            Intent i = getIntent();
            tv_sname.setText("用户: " + i.getStringExtra("sname"));
        }
    }

    void initView() {
        //    1-页面控件初始化
        tv_sname = findViewById(R.id.tv_sname);
        tv_cnt = findViewById(R.id.tv_cnt);
        tv_question = findViewById(R.id.tv_question);
        tv_option1 = findViewById(R.id.tv_option1);
        tv_option2 = findViewById(R.id.tv_option2);
        tv_option3 = findViewById(R.id.tv_option3);
        tv_option4 = findViewById(R.id.tv_option4);
        tv_choose = findViewById(R.id.tv_choose);
        //    2-对每个选项的TextView设置监听
        tv_option1.setOnClickListener(this);
        tv_option2.setOnClickListener(this);
        tv_option3.setOnClickListener(this);
        tv_option4.setOnClickListener(this);
        //    3-对三个按钮设置监听
    }
}
```

```

        findViewById(R.id.btn_pre).setOnClickListener(this);
        findViewById(R.id.btn_next).setOnClickListener(this);
        findViewById(R.id.btn_submit).setOnClickListener(this);
    }

    @Override
    public void onClick(View v) {

    }

}

```

3. 考题数据库加载: DBHelper.java

3-1 上传题目

上传exam_insert.txt至/data/data/<应用包名>/databases/目录下:

>	com.android.vending	drwx-----	2024-04-10 03:21	4 KB
>	com.android.vpndialogs	drwx-----	2024-04-10 03:21	4 KB

	test11111111.txt	-rw-rw----	2024-04-19 08:21	18 B

3-2 加载题目到数据库

cmd -> 通过adb shell进入模拟器, (参考步骤4, 3, 3-7), 导入题库

```

sqlite> .separator ";"
sqlite> .import exam_insert.txt examinfo
sqlite> select * from examinfo;
1;Android安装包文件简称APK, 其后缀名是( );apk;exe;text;app;apk
2;Android 工程中存放各种程序资源的目录是( );src;gen;res;bin;res
3;Android项目中的布局文件放在哪个目录下( );res/layout;res/value/assets;res/drawable;res/layout
4;在创建Android工程时, 填写的Minimum Required SDK是( );匹配的目标版本;程序最低兼容的版本;使用哪个SDK版本编译程序;SDK的主题;程序最低兼容的版本
5;下列表示Toast较长时间显示的是( );Toast.LENGTH_LONG;Toast.LONG;Toast.LENGTH_SHORT;Toast.SHORT;Toast.LENGTH_LONG
6;在相对布局文件中, 把控件显示在另外一个控件的右侧使用的属性是( );layout_toRightOf;layout_toLeftOf;layout_toStartOf;layout_toEndOf;layout_toRightOf
7;在帧布局中的子控件默认是( )对齐的.; 右上角;左上角;左下角;右下角;左上角
8;在下列选项中, 用于给Activity指定主题的属性是( );icon;label;theme;style;theme
9;Android UI开发中, 如果TableLayout的第一个TableRow有两个控件, 第二个TableRow有三个控件, 那这个TableLayout就有( )列.; 1;2;3;4;3
sqlite>

```

3-3 查询所有题目: DBHelper.java

在DBHelper.java中增加新的方法: 查询examinfo中所有记录并返回游标。

```

package com.example.examinationapp;

//1-继承SQLiteOpenHelper抽象类
public class DBHelper extends SQLiteOpenHelper {
    ...
    public Cursor loadExam() {

```

```

        Cursor cursor = null;
        SQLiteDatabase db = getReadableDatabase();
        cursor = db.query(TABLE_EXAM,
            null, null, null,
            null, null, null);
        return cursor;
    }
}

```

3-4 在页面显示题目：TestActivity.java

step1-4

```

package com.example.examinationapp;

...
//7-当前activity实现OnClickListener接口
public class TestActivity extends AppCompatActivity implements
    View.OnClickListener {

    ...
    //    2-与数据库初始化相关的全局变量
    private DBHelper dbHelper;
    private Cursor cursor; // 查询得到的所有题目
    private int questionCnt; // 题目总数
    private String[] stuAns; // 学生的答案,用数组保存
    private String[] rightAns; // 正确答案
    private int idx = 0; // 当前题目索引号

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_test);
        //    调用initView
        initView();
        //    获得从Main页面传过来的intent
        if (getIntent() != null) {
            Intent i = getIntent();
            tv_sname.setText("用户: " + i.getStringExtra("sname"));
        }
        //    4-调用initView
        initDB();
    }

    void initView() {
        ...
    }

    //    1-数据库初始化
    void initDB() {
        dbHelper = new DBHelper(this);
        cursor = dbHelper.loadExam();
        if (cursor != null && cursor.getCount() > 0) {
            questionCnt = cursor.getCount();
            stuAns = new String[questionCnt]; // 创建空的数组用于存放学生答案
            rightAns = new String[questionCnt]; // 创建空的数组用于存放题目的正确答案
        }
    }
}

```

```

        cursor.moveToNext();
        rightAns[idx] = cursor.getString(6); //设置正确答案数组的第一个值
        show(); // 在页面显示题目
    }
}

void show() {
//    3-页面显示题目,做题进度与用户选择的答案
    tv_cnt.setText("已完成: " + (idx+1) + "/" + questionCnt);
    tv_question.setText(cursor.getString(1));
    tv_option1.setText("A." + cursor.getString(2));
    tv_option2.setText("B." + cursor.getString(3));
    tv_option3.setText("C." + cursor.getString(4));
    tv_option4.setText("D." + cursor.getString(5));
    if (stuAns[idx] != null) {
        tv_choose.setText("你的选择: " + stuAns[idx]);
    } else {
        tv_choose.setText("");
    }
}

@Override
public void onClick(View v) {
}
}

```

3-5 计算学生成绩并保存到数据库: TestActivity.java

```

...

//7-当前activity实现OnClickListener接口
public class TestActivity extends AppCompatActivity implements
View.OnClickListener {

    ...
    Student candidate = null; // 6-设置该对象为全局变量

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_test);
        ...
        if (getIntent() != null) {
            Intent i = getIntent();
            tv_sname.setText("用户: " + i.getStringExtra("sname"));
//            5-创建student对象表示当前考生: candidate,并设置该对象的学号
            candidate = new Student();
            candidate.setSid(i.getStringExtra("sid"));
        }
        ...
    }

    ...

    @Override
    public void onClick(View v) {
        if (cursor == null || cursor.getCount() < 0) {

```

```

        return;
    }
    // 1-跳回上一题
    if (v.getId() == R.id.btn_pre) {
        if(cursor.moveToPrevious()){
            idx--; // 题号-1
            show(); // 显示题目
        } else {
            Toast.makeText(this, "已经是第一题", Toast.LENGTH_SHORT).show();
        }
    }
    // 2-跳转到下一题
    } else if (v.getId() == R.id.btn_next) {
        if(cursor.moveToNext()) {
            idx++; // 题号+1
            if (rightAns[idx] == null) { // 记录该题的正确答案
                rightAns[idx] = cursor.getString(6);
            }
            show(); // 显示题目
        } else {
            Toast.makeText(this, "已经是最后一题", Toast.LENGTH_SHORT).show();
        }
    }
    // 3-用户点击选项选择
    } else if(v.getId() == R.id.tv_option1 || v.getId() == R.id.tv_option2
    || v.getId() == R.id.tv_option3 ||v.getId() == R.id.tv_option4) {
        TextView tv = (TextView) v; // 将当前v对象强转为TextView对象
        stuAns[idx] = tv.getText().toString().substring(2); // 记录学生的答案
        tv_choose.setText("你的选择: " + tv.getText().toString()); // 在页面上显示学生的选择
    } else {
    // 4-用户点击交卷
        calScore(); // 计算学生成绩
        dbHelper.updateGrade(candidate); // 更新数据库student表格中学生的成绩
        Toast.makeText(this, "提交成功", Toast.LENGTH_SHORT).show();
        finish(); // 结束当前activity,返回主页
    }
}
// 7-计算学生成绩
void calScore() {
    int score = 0;
    for (int i=0; i < questionCnt; i++) { // 遍历所有题目
        if (stuAns[i] == null) { //如果学生没有作答,直接跳到下一题
            stuAns[i] = "None";
            continue;
        }
        if (stuAns[i].equals(rightAns[i])) { // 判断学生答案与正确答案是否相等
            score = score + 10; // 每题10分
        }
    }
    candidate.setScore(score); // 设置当前考生的成绩
    String ans = String.join(";", stuAns);
    candidate.setExamans(ans); // 设置当前考生的答案
    int examcnt = candidate.getExamcnt() + 1;
    candidate.setExamcnt(examcnt); // 设置当前考试的考试次数
}
}

```

3-6 更新数据库中成绩：DBHelper.java

```
package com.example.examinationapp;
...

//1-继承SQLiteOpenHelper抽象类
public class DBHelper extends SQLiteOpenHelper {
...
    public int updateGrade(Student stu) {
        SQLiteDatabase db = getWritableDatabase();
        String whereClause = "sid=?";
        String [] args = new String[]{stu.getSid()};
        ContentValues vals = new ContentValues();
        vals.put("sscore", stu.sscore);
        vals.put("examans", stu.examans);
        vals.put("examcnt", stu.examcnt);
        return db.update(TABLE_STU, vals, whereClause, args);
    }
}
```

步骤8：查看成绩统计页面

1.布局文件： activity_score.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:background="#FFFFFF"
    tools:context=".ScoreActivity">
    <!--图标-->
    <TextView
        android:layout_width="180dp"
        android:layout_height="180dp"
        android:background="@drawable/stat"
        android:layout_gravity="center"
        android:layout_margin="30dp"/>

    <!--成绩查询-->
    <TextView
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:gravity="center"
        android:text="成绩查询"
        android:textColor="#0C6BC2"
        android:textSize="25sp"
        android:background="#220C6BC2"
        android:layout_margin="10dp"
```

```
        android:padding="5dp"/>
<!--学生信息显示-->
<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="match_parent"
        android:layout_weight="0"
        android:text="学        号:  "
        android:textColor="#0C6BC2"
        android:textSize="25sp" />

    <TextView
        android:id="@+id/tv_sid"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:textSize="25sp" />
</LinearLayout>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="0"
        android:text="学生姓名:  "
        android:textColor="#0C6BC2"
        android:textSize="25sp" />

    <TextView
        android:id="@+id/tv_sname"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:textSize="25sp" />
</LinearLayout>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">
```

```
<TextView
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_weight="0"
    android:text="所在院系:  "
    android:textColor="#0C6BC2"
    android:textSize="25sp" />

<TextView
    android:id="@+id/tv_sdep"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_weight="1"
    android:textSize="25sp" />
</LinearLayout>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="0"
        android:text="考试次数:  "
        android:textColor="#0C6BC2"
        android:textSize="25sp" />

    <TextView
        android:id="@+id/tv_ecnt"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:textSize="25sp" />
</LinearLayout>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:orientation="horizontal"
    android:layout_marginHorizontal="20dp"
    android:layout_marginVertical="5dp">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="0"
        android:text="考试成绩:  "
        android:textColor="#0C6BC2"
        android:textSize="25sp" />

    <TextView
        android:id="@+id/tv_sscore"
```

```

        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:textSize="25sp" />
    </LinearLayout>
    <!-- 显示通过还是不及格-->
    <ImageView
        android:id="@+id/iv_res"
        android:layout_width="300dp"
        android:layout_height="60dp"
        android:layout_gravity="center"/>
    <!--返回按钮-->
    <Button
        android:id="@+id/btn_back"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_gravity="center"
        android:layout_margin="20dp"
        android:text="返回"
        android:textSize="25sp"
        android:textColor="#FFFFFF"
        android:background="#1C8DE6" />
</LinearLayout>

```

2. 实现页面功能ScoreActivity.java

- 从数据库查询学生数据并显示;
- 结束返回主页面
- step1-6

```

package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.ImageView;
import android.widget.TextView;

public class ScoreActivity extends AppCompatActivity implements
View.OnClickListener {
    //4-设置相关全局变量
    private TextView tv_sid;
    private TextView tv_sname;
    private TextView tv_sdep;
    private TextView tv_sscore;
    private TextView tv_ecnt;
    private String sid;
    private Student stu = null;
    private DBHelper dbHelper;
    private ImageView iv_res;

    @Override

```

```

protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_score);
    //      5-分别调用三个方法
    initView();
    initDB();
    show();
}
//      1-页面初始化
void initView() {
    tv_sid = findViewById(R.id.tv_sid);
    tv_sname = findViewById(R.id.tv_sname);
    tv_sdep = findViewById(R.id.tv_sdep);
    tv_ssScore = findViewById(R.id.tv_ssScore);
    tv_ecnt = findViewById(R.id.tv_ecnt);
    iv_res = findViewById(R.id.iv_res);
    findViewById(R.id.btn_back).setOnClickListener(this);
    if (getIntent() != null) {
        Intent i = getIntent();
        sid = i.getStringExtra("sid");
    }
}
//      2-数据库初始化并根据学号查询改学生数据
void initDB() {
    dbHelper = new DBHelper(this);
    stu = dbHelper.queryStu(sid);
}
//3-显示学生数据
void show() {
    if (stu != null) {
        tv_sid.setText(stu.getSid());
        tv_sname.setText(stu.getSname());
        tv_sdep.setText(stu.getSdep());
        tv_ssScore.setText(String.valueOf(stu.getSscore()));
        tv_ecnt.setText(String.valueOf(stu.getExamcnt()));
        if (stu.getSscore() >= 60) { // 及格则显示及格，否则为不及格图片
            iv_res.setImageResource(R.drawable.pass);
        } else {
            iv_res.setImageResource(R.drawable.failed);
        }
    }
}
//      6-结束当前页面
@Override
public void onClick(View v) {
    finish();
}
}

```

3. 数据库查询: DBHelper.java

通过学号查询学生的成绩信息等。

```
package com.example.examinationapp;
...

public class DBHelper extends SQLiteOpenHelper {
...

    public Student queryStu(String sid) {
        SQLiteDatabase db = getReadableDatabase();
        String whereClause = "sid=?"; // 根据学号查询该学生数据，并将数据放入student对象
        String [] args = new String[] {sid};
        Student stu = null;
        Cursor cursor = db.query(TABLE_STU,
            null, whereClause, new String[] {sid},
            null, null, null);
        if(cursor.getCount() > 0) {
            stu = new Student();
            cursor.moveToNext();
            stu.setSid(sid);
            stu.setSname(cursor.getString(cursor.getColumnIndex("sname")));
            stu.setSdep(cursor.getString(cursor.getColumnIndex("sdep")));
            stu.setSscore(cursor.getInt(cursor.getColumnIndex("sscore")));
            stu.setExamcnt(cursor.getInt(cursor.getColumnIndex("examcnt")));
            stu.setExamans(cursor.getString(cursor.getColumnIndex("examans")));
        }
        return stu;
    }
}
```

步骤9：查看考试页面

1. 页面布局: activity_review.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="10dp"
    tools:context=".ReviewActivity">
    <!--显示题目进度-->
    <TextView
        android:id="@+id/tv_cnt"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:textSize="20sp"
        android:textColor="#88888888">
```

```
        android:layout_gravity="right"
        android:layout_marginTop="15dp"/>
<!--显示题目-->
<TextView
    android:id="@+id/tv_question"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:textSize="30sp"
    android:textColor="#555555"
    android:layout_marginVertical="15dp"/>

<TextView
    android:id="@+id/tv_option1"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#1157bbc5"/>

<TextView
    android:id="@+id/tv_option2"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#2257bbc5"/>

<TextView
    android:id="@+id/tv_option3"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#1157bbc5"/>

<TextView
    android:id="@+id/tv_option4"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="5dp"
    android:textSize="25sp"
    android:textColor="#57bbc5"
    android:background="#2257bbc5"/>
<!--显示用户答案-->
<TextView
    android:id="@+id/tv_choose"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:layout_marginVertical="10dp"
    android:textSize="25sp"/>

<!--显示正确答案-->
<TextView
    android:id="@+id/tv_ans"
    android:layout_width="match_parent"
```

```
        android:layout_height="wrap_content"
        android:layout_marginVertical="10dp"
        android:background="#22AA22C5"
        android:textSize="25sp"/>

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:padding="20dp"
    android:orientation="horizontal">
<!-- 上一题 -->
    <Button
        android:id="@+id/btn_pre"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="上一题"
        android:textColor="#FFFFFF"
        android:background="#4757AE"
        android:layout_margin="20dp"
        android:textSize="20sp"/>
<!-- 下一题 -->
    <Button
        android:id="@+id/btn_next"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="下一题"
        android:textColor="#FFFFFF"
        android:background="#4757AE"
        android:layout_margin="20dp"
        android:textSize="20sp"/>
    <!--      返回 -->
    <Button
        android:id="@+id/btn_back"
        android:layout_width="0dp"
        android:layout_height="wrap_content"
        android:layout_weight="1"
        android:text="返回"
        android:textColor="#FFFFFF"
        android:background="#4757AE"
        android:layout_margin="20dp"
        android:layout_gravity="center"
        android:textSize="25sp"
        android:visibility="gone"/>
</LinearLayout>
</LinearLayout>
```

2. 实现页面功能ReviewActivity.java

step 1-4

```
package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.database.Cursor;
import android.graphics.Color;
import android.os.Bundle;
import android.util.Log;
import android.view.View;
import android.widget.Button;
import android.widget.TextView;
import android.widget.Toast;

public class ReviewActivity extends AppCompatActivity implements
View.OnClickListener {
    private TextView tv_question;
    private TextView tv_option1, tv_option2, tv_option3, tv_option4;
    private TextView tv_choose, tv_ans, tv_cnt;
    private Cursor cursor;
    private Student stu = null;
    private DBHelper dbHelper;
    private String sid;
    private int idx = 0;
    private String[] stuAns;
    private Button btn_back;
    private int cnt;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_review);
        initView();
        initDB();
    }
    // 1-初始化页面控件
    void initView() {
        tv_question = findViewById(R.id.tv_question);
        tv_option1 = findViewById(R.id.tv_option1);
        tv_option2 = findViewById(R.id.tv_option2);
        tv_option3 = findViewById(R.id.tv_option3);
        tv_option4 = findViewById(R.id.tv_option4);
        tv_choose = findViewById(R.id.tv_choose);
        tv_cnt = findViewById(R.id.tv_cnt);
        tv_ans = findViewById(R.id.tv_ans);
        btn_back = findViewById(R.id.btn_back);
        findViewById(R.id.btn_pre).setOnClickListener(this);
        findViewById(R.id.btn_next).setOnClickListener(this);
        btn_back.setOnClickListener(this);
        if (getIntent() != null) {
            Intent i = getIntent();
        }
    }
}
```

```

        sid = i.getStringExtra("sid");
    }
}

//2-数据库初始化
void initDB() {
    dbHelper = new DBHelper(this);
    stu = dbHelper.queryStu(sid);
    stuAns = stu.getExamans().split(";");
    cursor = dbHelper.loadExam();
    if (cursor != null && cursor.getCount() > 0) {
        cnt = cursor.getCount();
        cursor.moveToNext();
        show();
    }
}

//3-页面显示题目以及学生作答结果
void show() {
    tv_cnt.setText("已完成: " + (idx + 1) + "/" + cnt);
    tv_question.setText(cursor.getString(1));
    tv_option1.setText("A." + cursor.getString(2));
    tv_option2.setText("B." + cursor.getString(3));
    tv_option3.setText("C." + cursor.getString(4));
    tv_option4.setText("D." + cursor.getString(5));
    tv_choose.setText("你的选择: " + stuAns[idx]);
    tv_ans.setText("正确答案: " + cursor.getString(6));

    //    如果学生回答正确, 设置学生作答为绿色, 否则为红色
    if (stuAns[idx].equals(cursor.getString(6))) {
        tv_choose.setTextColor(Color.GREEN);
    } else {
        tv_choose.setTextColor(Color.RED);
    }

    //    当到最后一题时, 设置返回按钮显示, 否则隐藏
    if (idx < (cnt - 1)) {
        btn_back.setVisibility(View.GONE);
    } else {
        btn_back.setVisibility(View.VISIBLE);
    }
}

//    4-设置3个按钮的监听事件
@Override
public void onClick(View v) {
    //    上一题按钮
    if (v.getId() == R.id.btn_pre) {
        if (cursor.moveToPrevious()) {
            idx--;
            show();
        } else {
            Toast.makeText(this, "已经是第一题", Toast.LENGTH_SHORT).show();
        }
    }

    //    下一题按钮
    } else if (v.getId() == R.id.btn_next) {
        if (cursor.moveToNext()) {
            idx++;

```

```

        show();
    } else {
        Toast.makeText(this, "已经是最后一题", Toast.LENGTH_SHORT).show();
    }
//    返回按钮
    } else {
        finish();
    }
}
}

```

源码文件查看

1. LoginActivity.java

```

package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Context;
import android.content.Intent;
import android.content.SharedPreferences;
import android.database.SQLException;
import android.os.Bundle;
import android.view.View;
import android.widget.CheckBox;
import android.widget.EditText;
import android.widget.Toast;

//4-让当前activity实现OnClickListener接口，并实现onClick方法
public class LoginActivity extends AppCompatActivity implements
View.OnClickListener {
    //    3-设置变量为全局变量
    private EditText et_uid;
    private EditText et_upwd;
    private CheckBox cb_save;
    private SharedPreferences pref;
    private SharedPreferences.Editor editor;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_login);
//    2-调用初始化方法
        initView();
        pref = getSharedPreferences("login", Context.MODE_PRIVATE);
        editor = pref.edit();
        loadInfo();
    }

//    1-页面控件初始化
    void initView() {

```

```

        // 学号输入框
        et_uid = findViewById(R.id.et_uid);
        // 密码输入框
        et_upwd = findViewById(R.id.et_upwd);
        // 是否保存密码复选框
        cb_save = findViewById(R.id.cb_save);
        findViewById(R.id.btn_login).setOnClickListener(this); // 设置监听：登录按钮
        findViewById(R.id.btn_register).setOnClickListener(this); //设置监听：跳转
注册
    }

        }
    }
}

```

```

    } else { // 注册按钮跳转到注册页面
        Intent i = new Intent(this, RegisterActivity.class);
        startActivity(i);
    }
}
}

```

2. RegisterActivity.java

```

package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.os.Bundle;
import android.view.View;
import android.widget.EditText;
import android.widget.Toast;

//4-让当前activity实现OnClickListener接口，并实现onClick方法
public class RegisterActivity extends AppCompatActivity implements
View.OnClickListener{
    //    3-设置变量为全局变量
    private EditText et_rid;
    private EditText et_rname;
    private EditText et_rpwd;
    private EditText et_rdep;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_register);
    }
    //    2-调用初始化方法
    initView();
}
//    1-页面控件初始化
void initView() {
    et_rid = findViewById(R.id.et_rsid); //学号输入框
    et_rname = findViewById(R.id.et_rname); //学生姓名输入框
    et_rpwd = findViewById(R.id.et_rpwd); //学生密码输入框
    et_rdep = findViewById(R.id.et_rdep); //学生学院输入框
    findViewById(R.id.btn_registeruser).setOnClickListener(this); // 注册按钮
    监听
}
//    5-在onClick中写入按钮监听的事件
@Override
public void onClick(View v) {
    // 获得页面用户输入值
    String rid = et_rid.getText().toString();
    String rname = et_rname.getText().toString();
    String rpwd = et_rpwd.getText().toString();
    String rdep = et_rdep.getText().toString();
    Student stu = new Student(rid, rname, rpwd, rdep);
    // dbHelper初始化
}

```

```

        DBHelper dbHelper = new DBHelper(this);
        // 调用数据库的用户注册方法
        if (dbHelper.registerStu(stu) > 0) { // 成功插入数据,返回登录页面
            Toast.makeText(this, "注册成功", Toast.LENGTH_SHORT).show();
            finish(); // 将当前的activity结束,则返回登录页面
        } else { // 没有成功往数据库中插入数据,则表示改用户已经被注册
            Toast.makeText(this, "注册失败: 该学号已经被注册",
                Toast.LENGTH_LONG).show();
        }
    }
}

```

3. MainActivity.java

```

package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.TextView;

public class MainActivity extends AppCompatActivity implements
    View.OnClickListener {
    // 设置全局变量
    private String sname;
    private String sid;
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }
    // 6-调用initview
    initView();
}
// 1-页面控件初始化
void initView() {
    TextView tv_welcome = findViewById(R.id.tv_welcome);
    // 2-获得从login页面传过来的intent
    if (getIntent() != null) {
        Intent i = getIntent();
        // 3-从中取出学生姓名,学号信息
        sname = i.getStringExtra("sname");
        sid = i.getStringExtra("sid");
        // 4-在页面显示用户名
        tv_welcome.setText("欢迎用户: " + sname);
    }
}
// 5-对页面四个layout设置监听
findViewById(R.id.layout_test).setOnClickListener(this);
findViewById(R.id.layout_review).setOnClickListener(this);
findViewById(R.id.layout_score).setOnClickListener(this);
findViewById(R.id.layout_exit).setOnClickListener(this);
}

@Override

```

```

        public void onClick(View v) {
            if (v.getId() == R.id.layout_test) {
//                跳转到考试页面
                Intent i = new Intent(this, TestActivity.class);
                i.putExtra("sname", sname);
                i.putExtra("sid", sid);
                startActivity(i);
            } else if (v.getId() == R.id.layout_review) {
//                跳转到查看考试页面
                Intent i = new Intent(this, ReviewActivity.class);
                i.putExtra("sid", sid);
                startActivity(i);
            } else if (v.getId() == R.id.layout_score) {
//                跳转到查看成绩页面
                Intent i = new Intent(this, ScoreActivity.class);
                i.putExtra("sid", sid);
                startActivity(i);
            } else {
//                返回登录页面
                Intent i = new Intent(this, LoginActivity.class);
                startActivity(i);
            }
        }
    }
}

```

4. TestActivity.java

```

package com.example.examinationapp;

import androidx.appcompat.app.AppCompatActivity;

import android.content.Intent;
import android.database.Cursor;
import android.os.Bundle;
import android.util.Log;
import android.view.View;
import android.widget.TextView;
import android.widget.Toast;

//7-当前activity实现OnClickListener接口
public class TestActivity extends AppCompatActivity implements
View.OnClickListener {

    private TextView tv_sname;
    private TextView tv_cnt;
    private TextView tv_question;
    private TextView tv_option1;
    private TextView tv_option2;
    private TextView tv_option3;
    private TextView tv_option4;
    private TextView tv_choose;

//    2-与数据库初始化相关的全局变量
    private DBHelper dbHelper;
    private Cursor cursor; // 查询得到的所有题目
    private int questionCnt; // 题目总数

```

```

private String[] stuAns; // 学生的答案,用数组保存
private String[] rightAns; // 正确答案
private int idx = 0; // 当前题目索引号
Student candidate = null; // 6-设置该对象为全局变量

@Override
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_test);
    // 调用initView
    initView();
    // 获得从Main页面传过来的intent
    if (getIntent() != null) {
        Intent i = getIntent();
        tv_sname.setText("用户: " + i.getStringExtra("sname"));
